Prompt Flow

Create New Project

The diagram illustrates the process of creating a new project in Azure AI Foundry. It consists of two main steps:

- Create project**: This step starts by choosing a resource type. Two options are available:
 - Azure AI Foundry resource**: Described as "Recommended". It provides a unified setup, management, and access to agents, models, and tools. A link to "Learn more about the Azure AI Foundry resource" is provided.
 - AI hub resource**: For advanced scenarios like custom ML training, open-source model hosting, fine-tuning, or Azure Machine Learning integration. A link to "Learn more about the Azure AI Hub resource" is provided.
- Create a new project**: This step involves defining the project details. The user has entered the **Project name** as "prompt-flow-project" and selected the **Hub** as "(new) prompt-flow-hub". An "Advanced options" section is partially visible, stating that the project will be set up with defaults for optimal functionality and located in the swedencentral region. The "Create" button is at the bottom right.

Prompt Flow

New Flow

The screenshot shows the Azure AI Foundry interface with the following details:

- Project:** prompt-flow-project
- Page:** Flows
- Left Sidebar:** Contains sections like Overview, Model catalog, Playgrounds, AI Services, Build and customize, Agents, Templates, Fine-tuning, Content Understanding (PREVIEW), Observe and optimize, Tracing (PREVIEW), Monitoring, Protect and govern, Evaluation, Guardrails + controls, Risks + alerts (PREVIEW), and Governance (PREVIEW). A red arrow points to the "Prompt flow" button.
- Main Content Area:**
 - Create a new flow:** A large blue callout box with the text "Create a new flow" and "Activate your app's AI by cloning a sample or building a flow from scratch."
 - Create a new flow (Card):** A card with the title "Create a new flow" and "Create by type". It lists three options:
 - Standard flow:** Harness the power of Large Language Models, customized Python code, and more to craft your tailored prompt flow. Test the flow using custom datasets and seamlessly deploy as an endpoint for easy integration. Includes a "Create" button.
 - Chat flow:** On top of the standard flow, this option provides the chat history support and a user-friendly chat interface in the authoring/debugging UI. Includes a "Create" button.
 - Evaluation flow:** Create an evaluation flow to measure how well the output matches the expected criteria and goals. Includes a "Create" button.
 - Explore gallery:** A section titled "Explore gallery" with a "View more" link. It shows cards for various pre-built flows:
 - Multi-Round Q&A on Your Data:** Chat flow. Create a chatbot that uses LLM and data from your own indexed files to ground multi-round question and answering capabilities in enterprise chat scenarios. Includes "View detail" and "Clone" buttons.
 - Q&A on Your Data:** Standard flow. Create LLM and data from your own indexed files to ground multi-round question and answering capabilities. Includes "View detail" and "Clone" buttons.
 - Web Classification:** Standard flow. Use LLM to classify URLs into multiple categories. Includes "View detail" and "Clone" buttons.
 - Chat with Wikipedia:** Chat flow. Create a chatbot that leverages Wikipedia data to ground the responses. Includes "View detail" and "Clone" buttons.
 - Use GPT Function Calling:** Chat flow. Learn how to use GPT function calling to extend the capabilities of GPT models with external data sources. Includes "View detail" and "Clone" buttons.
 - Classification Accuracy Evalu...** Evaluation flow. Measuring the performance of a classification system by comparing its outputs to groundtruth. Includes "View detail" and "Clone" buttons.
 - QnA Groundedness Evaluation:** Evaluation flow. Compute the groundedness of the answer for the given question based on the context. Includes "View detail" and "Clone" buttons.
 - QnA Relevance Evaluation:** Evaluation flow. Compute the relevance of the answer for the given question based on the context. Includes "View detail" and "Clone" buttons.
